

Complete step-by-step runbook for running the AI-assisted NIFTY paper trading system

INSTRUMENT NIFTY 50 Options	MODE Paper Trading	MARKET HOURS 9:15 AM – 3:30 PM IST
SCAN FREQUENCY Every 5 minutes	MAX TRADES/DAY 5 (extendable to 7)	APPROVAL METHOD Telegram inline keyboard

IMPORTANT: NIFTY Futures & Options involve significant market risk. This system operates in PAPER TRADING mode only — no real money is placed.

■ PRE-MARKET SETUP

Complete all steps before 9:15 AM

8:45 AM – 9:10 AM

1 Start the dashboard server

Open your TradingBot folder in Windows Explorer.

Double-click `start_dashboard.vbs` — no window will appear.

It runs silently in the background on port 8765.

`start_dashboard.vbs`

Double-click

`start_hidden.vbs`

Double-click

Both run silently — no window appears

2 Open the live dashboard in your browser

Open any browser and go to: `http://localhost:8765`

Dashboard should load with all values at zero.

Engine state badge should say `IDLE` in green.

If page doesn't load — wait 30 seconds and refresh.

TradingBot

PAPER

IDLE

24,350.00 ●

Trades

2 / 5

P&L pts

+62.5

Streak

■ 2

Win%

100%

3 Start the trading bot

Double-click `start_hidden.vbs` in the TradingBot folder.

No window will appear — bot runs silently.

Wait 60–90 seconds, then refresh the dashboard.

`start_dashboard.vbs`

Double-click

`start_hidden.vbs`

Double-click

Both run silently — no window appears

4 Confirm the bot is alive on the dashboard

Refresh <http://localhost:8765> — 'Last Updated' timestamp should appear.

NIFTY price should be live in the top-right corner.

If still 'NOT STARTED' after 2 minutes → check `logs/` folder for errors.

TradingBot

PAPERIDLE

24,350.00

Trades	P&L pts	Streak	Win%
2 / 5	+62.5	2	100%

5 Confirm Telegram startup notification

Check your phone — bot sends a startup message on Telegram.

If no message arrives: verify `TELEGRAM_TOKEN` in `config/config.py`.

Bot will NOT scan before 9:15 AM regardless of start time.

■ TRADE OPENED

Signal: BUY 24400 CE | Lots: 1

Entry: ■24,350.00

SL: 25pts → -■937.50 (18.8% of capital)

T1: +■1,312 T2: +■2,250 T3: +■3,750

Capital Invested: ■5,625 (est. premium: 150pts)

■ DURING MARKET HOURS

Monitor the dashboard — act on Telegram approvals only

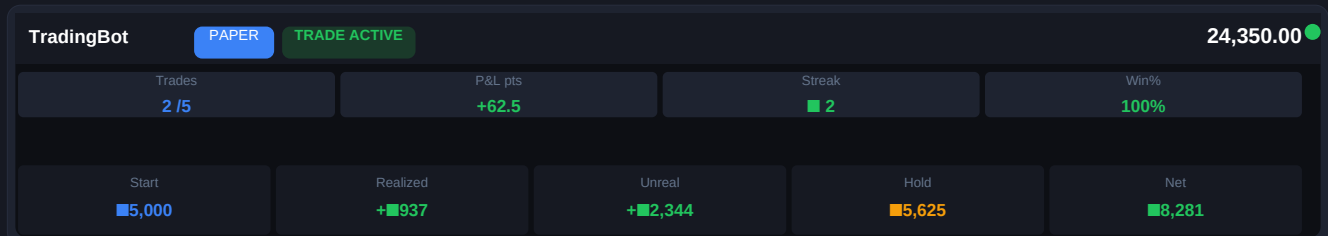

9:15 AM – 3:25 PM

6 Keep the live dashboard open

Go to <http://localhost:8765> — dashboard auto-refreshes every 15 seconds.

You do NOT need to manually refresh it.

Best viewed on a second monitor or dedicated browser tab.

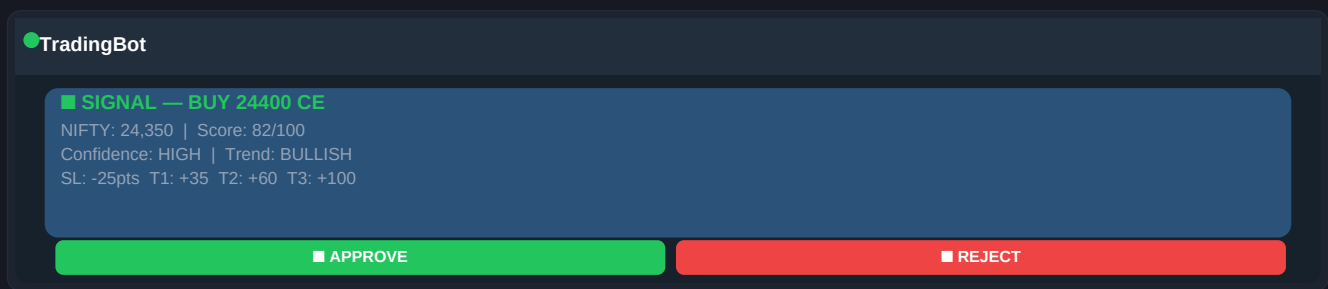

7 Receive the Telegram notification

When the bot finds a valid trade signal, Telegram sends an inline keyboard message.

Message shows: signal name, NIFTY price, score (out of 100), and SL/T1/T2/T3.

You have approximately 3 minutes to respond before the signal expires.

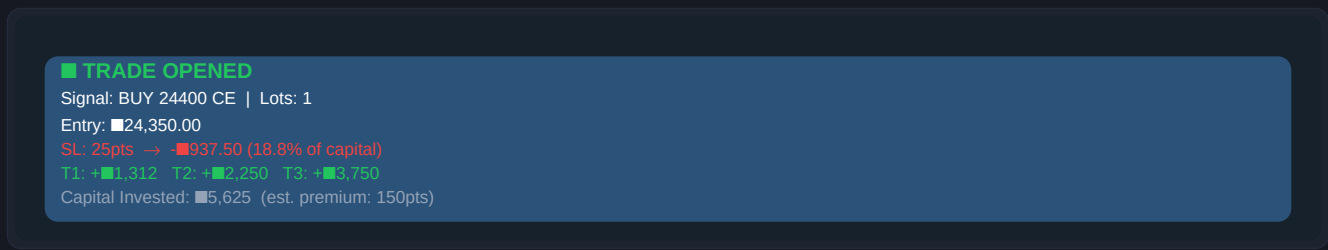

8 Tap APPROVE or REJECT

APPROVE → Trade opens immediately. Confirmation sent on Telegram.

REJECT → Bot skips this signal. Scans again in 5 minutes.

EXPIRED → No tap within timeout. Bot returns to IDLE automatically.

9 Monitor the active trade on the dashboard

Balance strip shows: Capital Invested / Money on Hold / Unrealized P&L / Net Balance.

P&L bar moves live. Milestone badges light up when T1, T2, T3 are hit.

Bot auto-closes on: SL hit, T3 hit, or 3:29 PM IST — no action needed from you.

Starting	Realized	Unrealized	On Hold	Net Bal
■5,000	+■937	+■2,344	■5,625	■8,281

10 Trade limit extension (if it occurs)

After 5 trades, if a HIGH confidence signal fires, Telegram asks:

APPROVE +2 TRADES / KEEP LIMIT

Only approve if signal score is 80+. When in doubt, keep the limit.

■ END OF DAY

Review today's performance, archive, and shut down

3:25 PM – 3:45 PM

11 Bot auto-closes any open trade at 3:29 PM

No action needed. The tracker loop triggers EOD auto-close automatically.

You'll receive a Telegram notification with the final P&L.

Engine state returns to IDLE. Dashboard updates within 60 seconds.

■ TRADE OPENED

Signal: BUY 24400 CE | Lots: 1

Entry: ■24,350.00

SL: 25pts → -■937.50 (18.8% of capital)

T1: +■1,312 T2: +■2,250 T3: +■3,750

Capital Invested: ■5,625 (est. premium: 150pts)

12 Daily archive is written automatically at 3:30 PM

Bot writes `data/archive/YYYY-MM-DD.json` with all trades + statistics.

Master index `data/archive/index.json` is updated.

Nothing to do — this is fully automatic.

`data/archive/2026-05-22.json`

Today's archive

`data/archive/index.json`

Written automatically at 3:30 PM — no action needed

Master index

13 Review today on the Analytics dashboard

Go to `http://localhost:8765/analytics` and click the '1 Week' tab.

Check: Win Rate (target >50%), Profit Factor (>1.3), Expectancy (positive).

If 2 or more metrics are in red — review signal settings before tomorrow.

1W 1M 3M 6M 1Y All

14 Stop the bot and dashboard server

Double-click `stop_bot.vbs` → then `stop_dashboard.vbs`

Both run silently. Close the browser tab after.

All data is safely written to disk — nothing is lost on shutdown.

`stop_bot.vbs`

Double-click

`stop_dashboard.vbs`

Double-click

Both run silently — no window

■ ■ WHAT HAPPENS AUTOMATICALLY

These run without any action from you

All day

What	File / Location	When
Daily trade log (Excel)	data/trade_log/trade_log_YYYY-MM-DD.xlsx	Per trade
Live status feed (JSON)	data/live_status.json	Every 60s
Closed trades backup	data/closed_trades_today.json	Each close
Daily archive	data/archive/YYYY-MM-DD.json	3:30 PM
Archive index	data/archive/index.json	3:30 PM
Scan decisions (Excel)	data/decisions/decisions_YYYY-MM-DD.xlsx	Each scan

■ ■ THINGS TO WATCH FOR

Common issues and what to do

Troubleshooting

Dashboard shows 'NOT STARTED' at 9:15 AM

Bot didn't launch. Re-run start_hidden.vbs and wait 90 seconds.

No Telegram startup message received

Check logs/ for errors. Likely missing TELEGRAM_TOKEN in config.

* ■ Red streak — 3+ consecutive losses

Risk engine blocks further trades today. Intentional. Do NOT restart the bot.

'Estimated' premium tag on a trade

NSE API unreachable. Balance uses 150pt estimate — fine for paper trading.

Analytics dashboard is completely blank

Populates only after first full archived day (first day you run past 3:30 PM).

High score signal but no Telegram message

Check CONFIDENCE_HIGH_THRESHOLD in config.py. May have been filtered as LOW.

WEEKLY REVIEW

Every Friday after 3:30 PM — takes 5 minutes

Friday 3:30 PM+

15 Open Analytics — switch to 1 Week view

Go to <http://localhost:8765/analytics>

Click the '1 Week' tab at the top.

Review the equity curve, daily P&L bars, and KPI row.

Weekly Performance Benchmarks

Metric	Good ■	Caution ■■	Review ■
Win Rate	> 50%	> 40%	< 40%
Profit Factor	> 1.3	> 1.0	< 1.0
Expectancy	Positive	Near Zero	Negative
Max Drawdown	< 3R	3–5R	> 5R

16 Review Time-of-Day performance heatmap

Heatmap shows P&L intensity for each 30-minute slot from 9:15 to 3:30.

Consistently red slots = consider avoiding trades in those windows.

Green slots = your best trading hours. Prioritize those.

17 Decide on parameter adjustments (if any)

Win rate < 40% for 2+ weeks → raise CONFIDENCE_HIGH_THRESHOLD in config.py.

Profit factor < 1.0 consistently → review stop loss or signal filters.

IMPORTANT: Only change parameters on Friday. Never mid-week.
